B4 is the new name for the updated version of Steinberg's Orchestral Soundtrack software which now includes a complete set of orchestral instrument sample libraries in the B4 Library. This sample library is the second in the library series from NI, developed in collaboration with Pulsar to create outstanding new instrument libraries that combine the flexibility of a modular synthesiser with the warmth and quality of a traditional acoustic instrument. Pulsar have done an excellent job combining sound sources and patching tools in this library, giving you the ability to create your own virtual orchestras at your computer. Every single sample in this library is a real instrument or a collection of real instruments, so all the pitch bends, articulations and non-linear processing can be heard. The library is also modular, so you can use any part as a drum, chord or percussion patch. NI's new B4 software also features a new instrument host, the XCUE 2, the first programmable control surface for the X-Series synthesisers. Using XCUE 2 you can easily control the volume and panning of your NI synthesiser as well as apply delay, reverb and filtering to your samples. B4 Orchestral Soundtrack Library Version 1.0 is now available, containing five new orchestral libraries, a new virtual synthesiser host, a comprehensive sound production program and a new patch editor. This huge update comes in two sections: the B4 Library and the Sound Producer: B4 Library This section of the software contains five new orchestral instrument libraries, all generated from a new, fully sampled piano in the B4 Piano Library. This library is the second in the library series from NI, developed in collaboration with Pulsar to create outstanding new instrument libraries that combine the flexibility of a modular synthesiser with the warmth and quality of a traditional acoustic instrument. Pulsar have done an excellent job combining sound sources and patching tools in this library, giving you the ability to create your own virtual orchestras at your computer. Every single sample in this library is a real instrument or a collection of real instruments, so all the pitch bends, articulations and non-linear processing can be heard. The library is also modular, so you can use any part as a drum, chord or percussion patch.
